

WP3 “INFRASTRUCTURE FOR PAPER EXPERTISE”

Jan C.A. van der Lubbe

Bernstein Meeting, Vienna, February 17, 2009

Image Processing Tasks

Vienna, January 17, 2007

- Sieve Feature Measurements in Binary Images
- Sieve Feature Measurements in Grayscale Images
- Sieve Feature Segmentation in Grayscale Images
- Watermark Imaging by Backlight Subtraction
- Identical Watermarks Identification

18 February, 2009

2

$[I, C]^T$

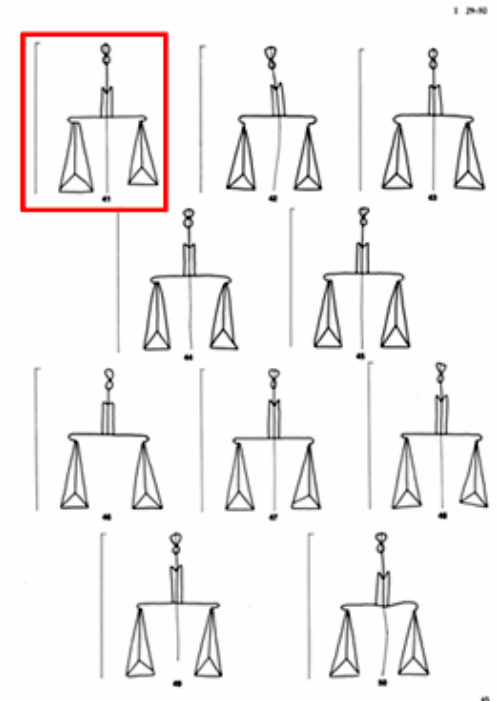

Sieve Feature Measurements in Binary Images

Software to isolate watermarks from the Piccard Online database and the printed Piccard collection

Performance 80% resp.
85%

Images will be used to automatically measure watermarks height and width.

They will also be used to identify identical watermarks within both collections.

Identical Watermarks Identification 1

Printed Piccard vs. Piccard Online

Compute vector

Compute Euclidean distance with the vectors of the database

Output: the first seven most similar watermarks to the query.

Performance: 90%.

In the 62% of the cases the identical watermark occupies the first place.

Sieve Feature Segmentation and Measurements in Grayscale Images 1

Software to segment chain and laid lines from X-ray and backlight images.

Measurements: laid lines density, chain lines distances

Identify identical pieces of paper based on chain and laid lines information. Demo version at:

<http://rembrandt.ewi.tudelft.nl/>

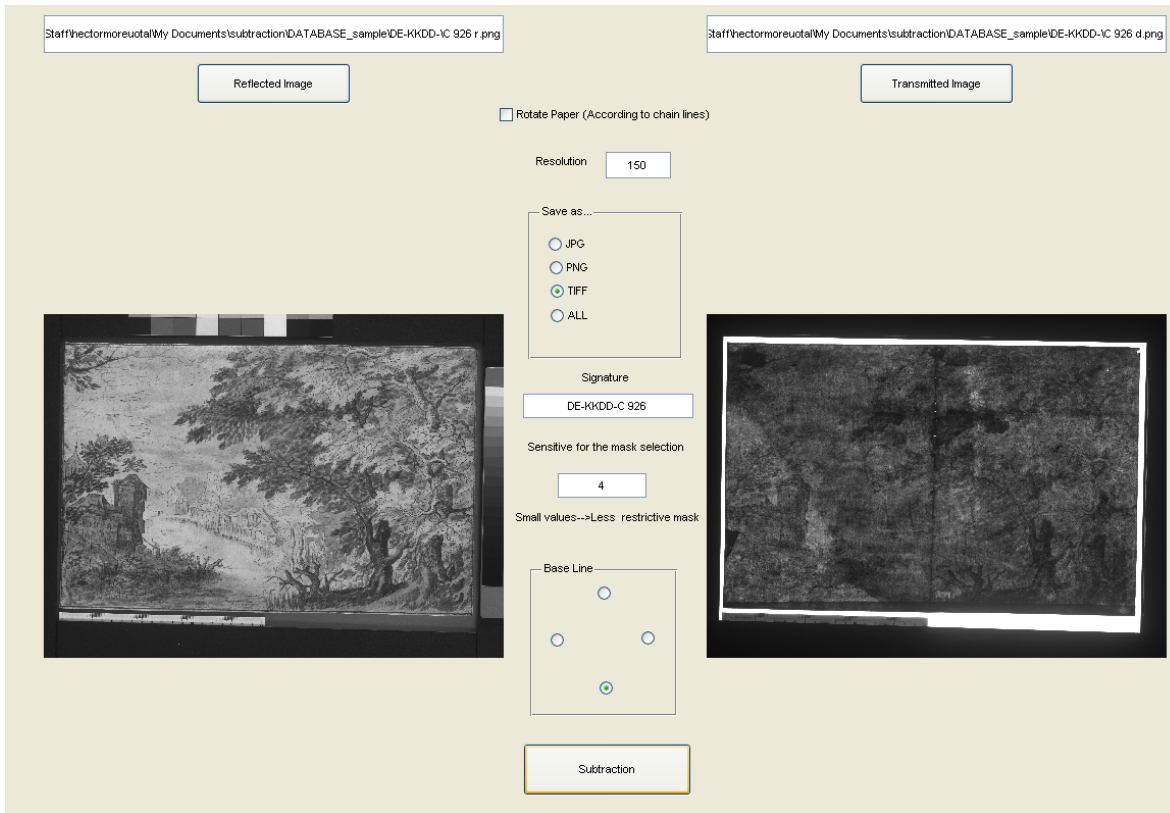

Sieve Feature Segmentation and Measurements in Grayscale Images 2

Software to extract watermarks (semi)automatically

Watermark Imaging by Backlight Subtraction

Software for subtraction of back- and frontlight imagery.

present and near-future work

- improvement of automatic watermark detection in binary images
- semi-automatic watermark detection in grayscale images
- advanced matching techniques

Bernstein Meeting, Stuttgart, July 1-2, 2008

- position of watermarks wrt chain lines
- detection of chain lines in watermarks in order to separate them from the watermark
- comparison of watermarks, similarity measurements

chain line distance measurements 1

1st Bernstein usability report by NIKI, November 2008

SABS a14, 1996 Braunschweig 1565

At least 4 different methods....

chain line distance measurements 2

Software for automatic re-measurement?

Which measurements:

- enclosing chain lines?
- average chain line distance?
- chain lines through watermark
-?

Unambiguous, uniform description
is required!

IT-GDSU 522 E

Software (Matlab)

- Picard Online isolation tool
- Printed Picard isolation tool
- Watermark identification within Printed Picard and Picard Online
- Chain line distances and Laid line density measurement tool
- Automatic watermark detection software
- Manual watermark detection tool
- Backlight subtraction tool
- Paper identification based on chain and laid lines

Discussion: downloadable versus not-downloadable
 Matlab-dependent versus Matlab-independent
